

Sika® Aktivator-100 (former Sika® Aktivator)

Adhesion promoter for various substrates

Typical Product Data (further values see Safety Data Sheet)

Chemical base	Solvent-based adhesion promoter	
Color (CQP ¹ 001-1)	Colorless to slightly yellow	
Application temperature	5 – 40 °C	
Application	Wipe-on, wipe-off with lint-free paper towel	
Consumption	20 ml / m ²	
Flash-off time ³	≥ 15 °C	10 minutes
	< 15 °C	30 minutes
	maximum	2 hours
Storage	In sealed container in a dry place at ≤ 25 °C	
Shelf life	12 months	

¹⁾ CQP = Corporate Quality Procedure

²⁾ 23 °C / 50 % r.h.

³⁾ For specific applications temperature and drying time may be different

Description

Sika® Aktivator-100 is an activating agent to improve adhesion. It is specifically formulated for the treatment of bond faces prior to application of various Sika polyurethane adhesives.

Areas of Application

Sika® Aktivator-100 improves adhesion on substrates such as glass, ceramic coated glass, the cut face of old polyurethane adhesive, polyurethane pre-applied windows, and paints.

This product is suitable for experienced professional users only. Tests with actual substrates and conditions have to be performed to ensure adhesion and material compatibility.

Method of Application

Wipe bond faces with a clean, lint-free paper towel moistened with Sika® Aktivator-100. Apply Sika® Aktivator-100 sparingly, and apply once only. Immediately wipe-off any excess with a clean, dry, lint-free paper towel.

Ideal application and surface temperature is between 15 °C and 25 °C.

Consumption depends on the specific nature of the substrates and manufacturing process.

Tightly re-seal container immediately after each use.

Important Note

Sika® Aktivator-100 contains solvent which may dull the surface finish of some freshly applied paints. Preliminary trials must be carried out. Never apply to porous substrates. Sika® Aktivator-100 may not dry completely on porous surfaces preventing the adhesive or sealant from curing properly. Protect adjacent surfaces by masking where necessary.

Sika® Aktivator-100 is a moisture reactive system. In order to maintain product quality it is important to re-seal the container with the inner plastic liner immediately after use. Once the surface pre-treatment operation is completed the cap has to be screwed on. Prolonged exposure to atmospheric moisture will cause Sika® Aktivator-100 to become inactive. Immediately discard Sika® Aktivator-100 if it has become opaque instead of clear.

Dispose the product of approx. one month after opening if used frequently or after 2 months in case of infrequent use. 30 ml cans are intended to be used for a single application only.

Never dilute or mix Sika® Aktivator-100 with any other substances. It is not to be used for tooling / smoothing of products and as a bare cleaning agent. For details see "General Guidelines for 1 component Polyurethanes".

Further Information

Working instructions issued for a defined application may further specify technical data contained in this Product Data Sheet. Copies of the following publications are available on request:
